Farhan Faiq Renardi

Data & AI Engineer with hands-on experience delivering data pipelines and AI applications across telecommunications and manufacturing enterprise environments. Designs dbt-based ELT workflows, production pgvector RAG systems, and Text-to-SQL services deployed via FastAPI and Docker.

PROFESSIONAL EXPERIENCE

Data Scientist | Telkom Indonesia (Indonesia's largest telecom company)
November 2025 - May 2026 (Intern)

- Built automated web scraping pipelines across 770 sources using Playwright and BeautifulSoup, orchestrated the workflow using n8n, saving 100+ manual hours.
- Increased dataset integrity to >90% across legacy HR systems by cleaning and processing 1,600+ employee records using Pandas.
- Trained a profile matchup machine learning model with Logistic Regression to support candidate matching.

Data Analyst | Semen Indonesia Group (Indonesia's largest cement manufacturer)
December 2023 - February 2024 (Intern)

- Cut reporting preparation time by 60% by automating data aggregation and executive reporting in Power BI.
- Deployed 2 pricing dashboards adopted by Pricing Management to track margins across 45 regional territories.

PROJECTS

LogistiQ - Logistics Information System January 2025 – September 2025

- Engineered full-stack logistics ERP (Django REST, PostgreSQL 16) with 8-role RBAC, centralizing 312 materials and 18 suppliers across 8 divisions for CV Qirana (a furniture enterprise located in Jepara, Indonesia).
- Accelerated supplier invoice extraction from 15 mins to <5 secs via multimodal OCR (Gemini Vision) at >90% accuracy, integrated with an AST-secured Text-to-SQL and pgvector RAG assistant.
- Containerized deployment using Docker and validated system stability through 67 automated unit and E2E integration tests (100% pass rate).

Worka - Job Intelligence Platform May 2026 – September 2026

- Engineered an automated ELT pipeline ingesting 2,000+ job postings from 5 portals into a Star Schema on PostgreSQL via dbt Core, featuring Playwright/CDP scrapers with automated LLM fallback.
- Built semantic resume matcher via PostgreSQL pgvector cosine similarity to compute skill gap scores.
- Deployed an analytics backend using FastAPI to serve hiring market trends, salary benchmarks, and tech-stack demand metrics.

Agentic DataOps August 2026 – September 2026

- Automated tabular dataset auditing via Langflow, detecting schema drift, encoding anomalies, and negative outliers, with dynamic Pandas scripts for self-healing date offsets.
- Structured ingestion pipelines for 500k rows using PyArrow chunking (chunksize=50,000) for memory-safe database loading into PostgreSQL.

TOOLS

- **Programming Languages:** Python, SQL, JavaScript, Bash
- **Databases:** PostgreSQL, pgvector (Vector DB), SQLite
- **Machine Learning:** scikit-learn, TensorFlow, Keras
- **AI/LLM:** Google GenAI SDK, Langflow, LangChain
- **Backend:** FastAPI, Django REST Framework
- **Data Pipelines & Ingestion:** dbt Core, PyArrow, Pandas, n8n, Web Scraping (Playwright, BeautifulSoup)
- **Business Intelligence and Visualization:** Power BI, Excel, Tableau, seaborn, matplotlib
- **Tools & Deployment:** Docker, Git

EDUCATION

Diponegoro University September 2021 - September 2025
Industrial Engineering
