

Farhan Faiq Renardi

Analytical problem-solver dedicated to transforming complex data into actionable business insights. Expert in leveraging Python, SQL, and Power BI to streamline operations across tech and manufacturing sectors. Backed by a strong foundation in Machine Learning to drive predictive analytics and strategic decision-making.

EDUCATION

Diponegoro University
Industrial Engineering

September 2021 - September 2025

PROFESSIONAL EXPERIENCE

[Intern] Data Scientist at Telkom Indonesia

November 2025 - Present

- Cleaned and processed more than 1600 HR data entries using Python (Pandas), ensuring high data integrity.
- Optimized an employee-role matching model (Logistic Regression) to support data-driven recruitment decisions.
- Built automated web scraping scripts (Playwright and BeautifulSoup), eliminating manual data entry across 770 sources.
- Conducted Exploratory Data Analysis (EDA) and translated technical findings into structured business reports.

[Intern] Data Analyst at Semen Indonesia Group

December 2023 - February 2024

- Developed Power BI dashboards to visualize margin trends and promotional impacts across 45 regional markets.
- Analyzed operational and financial data using Python and Excel, providing management with actionable profitability insights.
- Reduced weekly reporting time by automating data aggregation.

PROJECTS

Male Pattern Baldness Classification – Transfer Learning Project (Collaborative)

Developed a deep learning image classification model to predict male pattern baldness using transfer learning.

- Implemented transfer learning using pre-trained EfficientNetB3 architecture, achieving 88% test accuracy on male pattern baldness classification.
- Performed image preprocessing, augmentation, and dataset balancing.
- Fine-tuned model layers to optimize classification performance.
- Evaluated performance using accuracy, precision-recall, and confusion matrix analysis.
- Structured reproducible training pipeline for scalability and future feature expansion.

Logistics Information System for CV Qirana Furniture

Web-based logistics management system to streamline material request, stock tracking, and reporting processes.

- Developed full-stack system using Python (Django) and SQLite with Figma-based UI design.
- Applied SDLC (Waterfall) methodology from requirements analysis to system testing.
- Conducted Black-Box Testing achieving 100% functionality validation.
- Improved reporting efficiency and enabled real-time stock visibility.

ORGANIZATIONAL EXPERIENCE

[University Organization] Project Manager of Industrial Engineering Orientation Program

August 2021 – September 2021

- Led a 190-member team to organize a department-wide freshmen orientation and engagement program.
- Oversaw project planning, task delegation, and coordination across multiple divisions.
- Strengthened teamwork and communication among Industrial Engineering students.

[International Event] Coordinator of Licensing Division INDISCO XIV

February 2022 – November 2022

- Managed event licensing and administrative documentation for an international industrial design competition involving undergraduate participants across Southeast Asia.
- Coordinated with institutional partners and ensured compliance with local academic regulations.
- Supported the organizing committee in operational management and stakeholder correspondence.

CERTIFICATION

Professional Development Program "Project Risk Management" Series

Issued by Indonesia Risk Management Professional Association (IRMAPA)

TECHNICAL SKILLS

- **Data & BI:** SQL, Power BI, Tableau, Excel, Pandas, NumPy
- **Machine Learning:** scikit-learn, TensorFlow, Keras, Predictive Modeling
- **Programming & Web:** Python, SQL, JavaScript, Django, SQLite, MySQL
- **Tools:** Git/GitHub, BeautifulSoup, Playwright, n8n automation, Figma
