Farhan Faiq Renardi

Results-driven AI & Data Engineer with enterprise internship background at Telkom Indonesia and Semen Indonesia Group. Proven expertise in building containerized ELT pipelines (dbt Core, PostgreSQL), production GenAI workflows (pgvector RAG, Text-to-SQL), and full-stack web applications (FastAPI, Django REST).

EDUCATION

Diponegoro University September 2021 - September 2025
Industrial Engineering

PROFESSIONAL EXPERIENCE

Data Scientist Intern | Telkom Indonesia (Indonesia's largest telecom company)
November 2025 - May 2026

- Saved 100+ manual hours by engineering automated scraping pipelines across 770 web sources using Playwright & BeautifulSoup.
- Elevated dataset integrity to >90% across legacy HR systems by processing and cleaning 1,600+ records with Python (Pandas).
- Improved recruitment matching by developing an employee-role classification model (Logistic Regression) with hyperparameter tuning.
- **Tech-stack:** Python, n8n, Playwright, Excel, Docker, scikit-learn, BeautifulSoup, Chrome DevTools Protocol (CDP)

Data Analyst Intern | Semen Indonesia Group (Indonesia's largest cement manufacturer)
December 2023 - February 2024

- Cut weekly reporting preparation time by 60% by automating data aggregation and executive reporting workflows through Power BI.
- Tracked regional market margins across 45 territories by deploying 2 interactive dashboards directly utilized by Pricing Management.
- Guided pricing strategy by delivering weekly profitability analysis on operational and financial datasets using Python & Excel.
- **Tech-stack:** Power BI, Python, Pandas, Microsoft Excel, Business Intelligence, Data Modeling

PROJECTS

LogistiQ - Logistics & Supply Chain Information System January 2025 – September 2025
(Undergraduate Capstone Project)
Built an end-to-end web-based logistics ERP for CV Qirana Furniture (export manufacturer) to digitize inventory tracking, material requests, and purchase order lifecycles, replacing manual spreadsheets across 8 factory divisions.

- Engineered full-stack logistics ERP (Django REST, PostgreSQL 16) with 8-role RBAC, centralizing 312 materials and 18 suppliers.
- Reduced supplier invoice processing time by >90% (15 mins to < 5 secs) via multimodal OCR scanner (Gemini Vision) at > 90% accuracy.
- Built autonomous AI logistics assistant using Google GenAI SDK with AST-secured Text-to-SQL, pgvector RAG for factory SOP, and Tavily live market search.
- Ensured reliability via Docker, validated by 67 automated unit & E2E tests (100% pass).
- **Tech-stack:** Python, Django REST Framework, React, Tailwind CSS, PostgreSQL 16, pgvector, Docker, Pydantic, Google GenAI SDK, sqlparse.

Worka - Automated Tech Job Intelligence & ELT Platform (Self-Project) May 2026 – September 2026
End-to-end workforce intelligence platform engineered with modern ELT architecture and semantic vector matching to track job markets.

- Engineered automated ELT pipeline ingesting and modeling 2,000+ tech job postings from 5 portals into analytics-ready Star Schema using dbt Core on PostgreSQL 15.
- Eliminated scraping downtime by architecting resilient scrapers (Playwright + CDP) featuring an automated LLM fallback against dynamic DOM changes.
- Built semantic CV skill-matcher using PostgreSQL pgvector (cosine similarity), generating instant role-fit scores and skill gap insights for PDF/DOCX resumes.
- Deployed interactive analytics dashboard via FastAPI backend visualizing market hiring trends, salary benchmarks, and tech-stack demand.
- **Tech-stack:** Python, FastAPI, dbt Core, PostgreSQL 15, pgvector, Playwright, Chrome DevTools Protocol (CDP), Google Gemini API, Docker.

Agentic DataOps (Capstone Project – IBM SkillsBuild) August 2026 – September 2026
Autonomous AI-driven data governance system engineered to audit dirty tabular datasets, resolve schema drift, and synthesize self-healing transformation pipelines.

- Automated enterprise data auditing via Langflow, detecting schema drifts, encoding anomalies, and negative value outliers across dirty datasets.
- Engineered self-healing data pipeline synthesizing dynamic Pandas scripts to auto-correct Excel serial date offsets and segregate corrupt records.
- Architected 500k-row ingestion strategy utilizing vectorized PyArrow operations and batch chunking (chunksize=50,000) for memory-safe DB loads.
- **Tech-stack:** Langflow, Google Generative AI (Gemini Flash), Docker, PostgreSQL 16, Python, Pandas, PyArrow, JQ.

Medical Image Classification using Deep Learning (Open-Source) January 2025 – September 2025
Computer vision classification system developed to classify male pattern baldness stages using transfer learning and deployed for public evaluation.

- Achieved 88% test accuracy for male pattern baldness stage classification by fine-tuning EfficientNetB3 with custom grid-search hyperparameter optimization.
- Resolved severe dataset imbalance via targeted augmentation and deployed a production inference web application on Hugging Face Spaces.
- **Tech-stack:** Python, TensorFlow, Keras, EfficientNetB3, Hugging Face Spaces.
- **App Demo:** huggingface.co/spaces/hunsolooo/Male_Pattern_Baldness

CERTIFICATIONS

Build an AI Agent by IBM SkillsBuild
Google Cloud Skills Boost: Data Engineering and AI Tracks

TOOLS

- **Programming Languages:** Python, SQL, JavaScript, Bash
- **Data Engineering & Databases:** PostgreSQL, pgvector (Vector DB), dbt Core, PyArrow, Pandas
- **Machine Learning & Deep Learning:** scikit-learn, TensorFlow, Keras
- **LLM Orchestration & AI Agents:** Google GenAI SDK, Langflow, n8n
- **Backend & Data Ingestion:** FastAPI, Django REST Framework, Playwright, BeautifulSoup
- **Business Intelligence:** Power BI, Excel, Tableau
- **Tools & Deployment:** Docker, Git
